COIMBATORE INSTITUTE OF MANAGEMENT AND TECHNOLOGY

REPORT ON GREEN CAMPUS INITIATIVES

This report outlines the commendable green initiatives undertaken by Coimbatore Institute of Management and Technology to create a sustainable and eco-friendly campus. These initiatives are a result of collaborative efforts by both faculty and students, demonstrating a commitment to environmental conservation and responsible resource management.

Miyawaki Forest

One of the standout green initiatives in CIMAT is the establishment of a Miyawaki Forest within the campus. This initiative aims not only to enhance the aesthetic appeal but also to contribute to biodiversity conservation. The forest not only provides a green haven for the campus but also serves as an educational tool for students to understand the importance of native tree species.

Green Cover Across Campus

The commitment to creating a green environment is evident with greenery covering all parts of the campus. This not only enhances the overall ambiance but also promotes the well-being of the college community. The green cover acts as a natural cooling system, reducing the reliance on artificial cooling methods.

Energy Conservation Initiatives

Faculty and students have played a pivotal role in saving significant electricity through an energy audit. A comprehensive policy has been developed to reduce electricity consumption, emphasizing the importance of energy conservation.

All systems are equipped with sensors to ensure optimal performance, generating valuable data for further research in these areas. This data-driven approach underscores our commitment to continuous improvement in sustainable energy practices.

Reports of activities for the implementation

Future Green Initiatives

Coimbatore Institute of Management and Technology is actively planning additional green initiatives, particularly in wastewater treatment, recycling, and rainwater harvesting in a decentralized manner. The goal is to establish a closed-loop system that minimizes environmental impact and maximizes resource efficiency.

A waste management plan is in progress, which includes the separation of organic and inorganic waste. Moreover, a thorough review of available technologies for co-generating biomass energy from organic waste is underway, aligning with the college's broader sustainability objectives.

Community Outreach

Recognizing the importance of community engagement, students and faculty, especially those in undergraduate and postgraduate programs, are taking the lead in propagating these green ideas to neighbouring villages. The aim is to create awareness, share knowledge, and inspire sustainable practices beyond the college campus.

The green initiatives undertaken by CIMAT underscore our commitment to environmental sustainability and responsible stewardship. These initiatives not only create a positive impact within the campus but also extend to neighbouring communities, fostering a culture of environmental awareness and responsibility.
